

**Amendments to the Specification**

Please amend the title of the application as follows:

LIQUID CRYSTAL DISPLAY DEVICE HAVING MORE UNIFORM SEAL HEIGHTS AND ITS FABRICATING METHOD

The paragraph beginning at page 2, line 22:

a. Substrate patterning involves providing an upper substrate and a lower substrate. The upper substrate has color filters, a common electrode and a black matrix. The lower substrate [[is]] includes signal conductors, such as data lines and gate lines, and a thin film transistor (TFT) at the intersections of the data lines and the gate lines. The lower substrate also has pixel electrodes at pixel areas between the data lines and the gate lines.
